Time-Saving, Money-Saving Protection

Your Storage Solution

For your winter storage program, or to sell to your do-it-yourself customers, consider the high-quality, easy-to-use Transshield Storage Covers. These covers can save you time, money and provide the best protection available for indoor or outdoor storage for you or your customers. Transshield's patented three-layer material was developed to provide strength, reduce damage caused by abrasion or condensation. Plus, Transshield is removable for any needed winter service or sales.

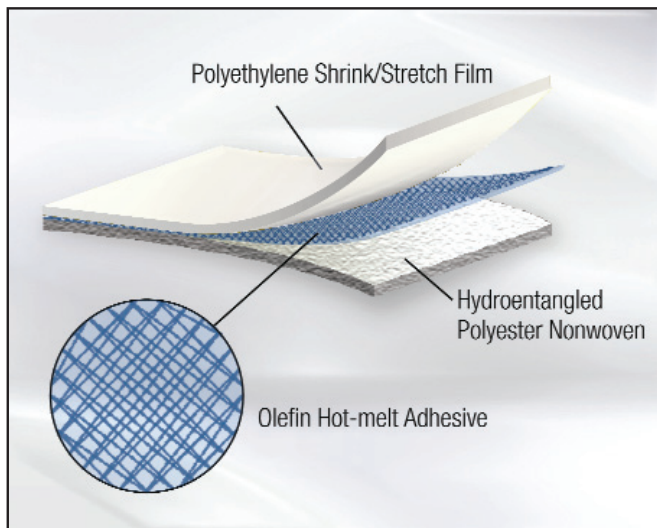

Three Layers of Protection

Transshield's outer layer is a special UV-resistant polyethylene shrink stretch film, available in Bright White. The middle layer is a hot-melt adhesive containing no solvents. The inner layer is a soft, non-woven polyester material. The combination of these three products provides superior surface protection — even to high gloss finishes. Simply put, Transshield's unique, non-abrasive composition protects boats during storage or transportation without causing damage to paint, plastic or other fine finishes.

Easy and Convenient

Transshield can be applied easier than most other products on the market and in a fraction of the time. These are custom-fit covers so there is less taping, tucking and folding than there would be with other forms of covering. Application takes only a few minutes. Simply install the cover, fix it to the boat being covered and shrink it tightly. Transshield covers allow access to the boat while in storage.

Material Makeup

Transshield's 3 layer Internationally patented material provides premium protection to high gloss surfaces of all sizes.

Benefits of Storage Covers

Transhield Aftermarket Cover Benefits

- Thicker than conventional film (18 mil vs. 7 mil)
- Patented fabric removes water vapor, keeping boat dry
- No tape applied to boat, making removal quick and easy
- Suitable for transport
- Supports 31 lbs/sq ft or about 2 feet of snow

How this Benefits the Boat Dealer

- Faster than conventional shrink film, by 2-3 times, do more boats in less time
- Remove cover to work on boat during off season and offer additional cleaning and detailing services or motor service
- Use Transhield covers to go to and from Winter and Spring Boat Shows
- No messy tape to apply and remove
- Less waste to remove
- No trimming, tucking and folding required

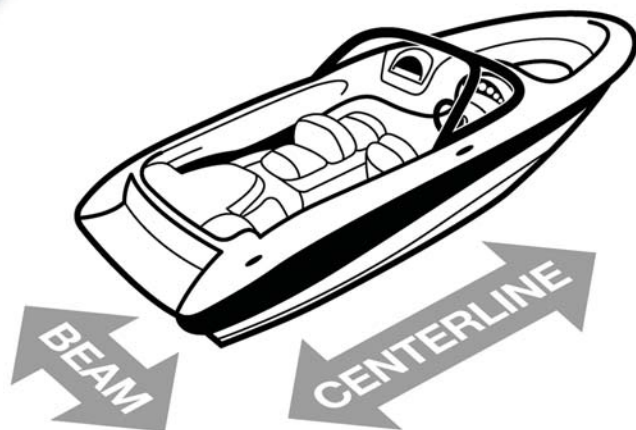

How this Benefits the Boat Owner

- Dry boat means less mold, mildew and failing electrical parts
- Reuse during regular season for inexpensive week to week boat storage* (save that expensive canvas)
- Easy access to interior to work on, upgrade, service or clean boat.

** Not intended to be used in place of day to day mooring cover. Back yard storage or trailer boat storage can be done.*

Sizing Instructions

RUN ABOUT/CENTER CONSOLE/ BASS BOAT/ALUMINUM STYLE

- ❶ Choose the boat that best fits your need.

Run About Style fits:

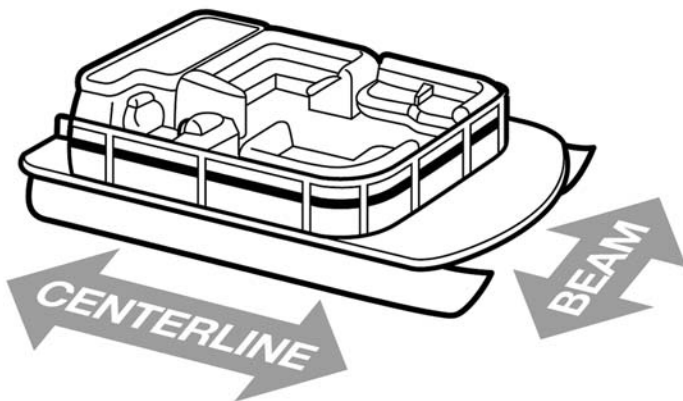

- Open Bow / Run About, both I/O and OB
- Ski Boats
- Most Bass Boats

- ❷ Measure the maximum centerline and the maximum beam (see diagram).

Transshield Covers shrink to fit, so the beam of the boat can be smaller than the cover beam.

The **centerline** is the length from the nose to the stern. The measurement should be horizontal, not over the windshield. If you want your Transshield cover to include the swim platform or outboard motor, please include this extra length in your centerline measurements.

The **beam** is the width of the boat at the widest part. That is typically around the windshield and/or aft.

PONTOON/HYBRID STYLE

- ❶ Choose the boat that best fits your need.

- ❷ Measure the maximum centerline (see diagram).

Transshield Covers shrink to fit, so the beam of the boat can be smaller than the cover beam.

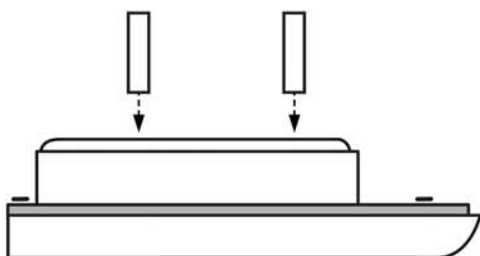

The **centerline** is the length from the nose to the stern of the deck area, NOT the length of the pontoon tubes. The measurement should be horizontal.
